SUMMARY

Cybersecurity & AI student at Maryville University with hands-on experience building applied AI products, cloud projects, and security assessment deliverables. Founder/builder of FoFit through Larry Investments LLC; experienced with React Native, Supabase, OpenAI API, AWS, technical support, LLM evaluation, penetration testing, and client-facing reporting. Seeking technology, cybersecurity, AI, cloud, or consulting internships/contract roles.

CERTIFICATIONS & EDUCATION

Google Cybersecurity Professional Certificate: Completed	CompTIA Security+: In Progress — Expected September 2026
Maryville University: B.S. Cybersecurity & Artificial Intelligence — Expected May 2028	Current Focus: Security+, portfolio media system, cyber/AI internship applications

EXPERIENCE

Founder & Product Builder — Larry Investments LLC / FoFit	Jan 2026 – Present
- Build applied AI fitness products across mobile, coach dashboard, website, and product infrastructure with React Native/Expo, Next.js, Supabase, OpenAI API, and TypeScript. - Own product strategy, UX flows, authentication/data architecture, AI coaching logic, GitHub workflows, deployment planning, and technical roadmap for a real product ecosystem. - Translate athlete, coach, and user needs into scoped features, technical tasks, dashboards, and demo-ready workflows.	
Student Consultant — Maryville Business Solutions	Jan 2025 – Present
- Support cybersecurity and technology consulting engagements by translating technical risk into clear business recommendations and remediation roadmaps. - Produced a 49-page penetration test report with executive summary, engagement scope, PTES-aligned methodology, severity matrix, evidence, 14 findings, and prioritized remediation plan. - Performed authorized lab assessment across two /24 subnets and five systems using Nmap, Hydra, Responder, John the Ripper, netexec, smbclient, xfreerdp, MySQL, Metasploit, and Linux CLI.	
Technology Support Assistant — IST Management Services	Aug 2025 – May 2026
- Supported campus IT operations through system troubleshooting, document workflows, print systems, user support, and secure handling of sensitive information. - Assisted with access-control-related processes, recurring issue documentation, and reliable day-to-day technology support across departments.	
AI Training Specialist — Outlier AI	Aug 2025 – Jan 2026
- Evaluated LLM outputs for accuracy, reasoning quality, instruction-following, and reliability across technical and creative domains. - Used structured prompt evaluation and feedback loops to improve model response consistency and quality.	

SELECTED PROJECTS

Cyberlou Penetration Test Report — Penetration Testing / Vulnerability Assessment / Reporting	Apr 2026
- Documented full attack chain from reconnaissance through credential capture, lateral movement, privilege escalation, persistence validation, and database proof-of-access in an authorized CTF environment. - Identified issues including weak SSH password policy, robots.txt disclosure, SMB signing not required, NTLMv2 capture/crack, plaintext SMB credentials, Webmin compromise, printer cache exposure, and unauthorized database access.	
FoFit — React Native / Expo / Supabase / OpenAI API / TypeScript	Jan 2026 – Present
Building AI-powered fitness platform with user authentication, persistent workout data, personalized training recommendations, AI coaching flows, and mobile-first UX.	
AWS Image Label Generator — Python / AWS Rekognition / AWS S3	Mar 2026
Built a cloud pipeline to upload images to S3, call Rekognition for object detection, and return labels, bounding boxes, and confidence scores through a Python workflow.	
AgentRoom — Next.js / TypeScript / Supabase / AI Workflow Tools	2026
Built an agent operations dashboard concept for managing AI agents, approvals, activity feeds, and GitHub/Vercel-style development workflows.	

SKILLS

Languages: Python, JavaScript, TypeScript | Frontend/Mobile: React Native, Expo, React, Next.js | Backend/Data: Supabase, PostgreSQL basics, APIs, authentication, session persistence | Cloud: AWS S3, Rekognition, EC2 basics, Vercel | AI: OpenAI API, LLM evaluation, prompt engineering, AI product workflows, automation | Cybersecurity: Penetration testing basics, risk assessment, phishing simulations, vulnerability reporting, Nmap, Hydra, Responder, John the Ripper, SMB/RDP basics, SIEM basics, networking fundamentals | Tools: Git, GitHub, VS Code, Linux CLI
